Riviera Utilities Receives Award of Excellence

Foley - During the 70th Annual Alabama Water Pollution Control Association's conference, held in Huntsville, Riviera Utilities received two distinct statewide awards. These awards recognized the utility companies continued dedication to excellence in both their water and wastewater treatment operations within the State of Alabama.

An "Award of Excellence" was given to Riviera Utilities for both the South and McAliley Water Treatment Plants. In addition, Riviera Utilities was awarded the "Best Operated Plant" for its Wastewater Treatment Facility. For three out of the last four years the Wastewater Treatment Facility has taken home top honors!

To be considered for either award, facilities must complete an application and allow a site visit by a review committee. Facilities are judged in a variety of categories including performance, water quality, record keeping, appearance and safety.

"We are extremely proud of our Water and Wastewater Department's continued dedication to excellence for the betterment of our customers. Their hard work is evidenced by recognition of these two prestigious statewide awards," stated Tom DeBell, General Manger.
