Riviera Utilities Issues Statement on Water Quality

Foley, AL – Safe, reliable drinking water is not something that should be taken for granted. James Wallace, Operations Manager of Riviera Utilities, wants residents to understand that the water they receive from Riviera Utilities continues to be of the highest quality and meets or exceeds all requirements.

“We take all the necessary steps to ensure customers receive the highest quality water possible. We incorporate an extensive corrosion control program to protect customers from the corrosion that may occur in the distribution system,” said Wallace. “Also, new service lines are made of copper or plastic. Plastic lines help reduce the potential risk of lead exposure. In addition, Riviera Utilities continues to use ground water wells that have been in place throughout Riviera’s operation. These wells continue to produce consistent water quality. We continuously test and monitor our potable water in accordance with all regulatory requirements. Each year, Riviera Utilities issues a Consumer Confidence Report (CCR), which documents that the water supply meets or exceeds all local, state, and federal Water Quality Standards,” said Wallace. “RU staff is committed to monitoring and providing the highest quality of drinking water for our customers,” added Wallace.
